Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by Michelle Brinkmeier and Sally Camper (Dept. Human Genetics University of Michigan Medical School 4301 MSRB 3 1500 W. Medical Center Dr. Ann Arbor,MI 48109-0638 USA) whose assistance we gratefully acknowledge.
Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

COMMENT Please visit our web site (http://genome.gsc.riken.jp/) for further details.
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence [5' GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCCC 3']. cDNA was cleaved with BamHI and XhoI. cDNA of size comprised longer than 7 kb was selected before cloning. Vector: a modified pBluescript KS(+) after bulk excision from Lambda FLC I. Cloning sites, 5' end: SalI; 3' end: BamHI. Host: DH10B.

Direct Submission
Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by Michelle Brinkmeier and Sally Camper (Dept. Human Genetics University of Michigan Medical School 4301 MSRB 3 1500 W. Medical Center Dr. Ann Arbor,MI 48109-0638 USA) whose assistance we gratefully acknowledge.
Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

RESULT 75
BG286553
LOCUS BG286553 741 bp mRNA linear EST 21-FEB-2001
DEFINITION 602382555F1 NIH_MGC_93 Homo sapiens cDNA clone IMAGE:4500277 5', mRNA sequence.
ACCESSION BG286553
VERSION BG286553.1 GI:13039536
KEYWORDS EST.
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.
REFERENCE 1 (bases 1 to 741)
AUTHORS NIH-MGC http://mgc.nci.nih.gov/.
TITLE National Institutes of Health, Mammalian Gene Collection (MGC)
JOURNAL Unpublished (1999)
COMMENT Contact: Robert Strausberg, Ph.D.
Email: cgapbs-r@mail.nih.gov
Tissue Procurement: ATCC
cDNA Library Preparation: Life Technologies, Inc.
cDNA Library Arrayed by: The I.M.A.G.E. Consortium (LLNL)
DNA Sequencing by: Incyte Genomics, Inc.
Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
Plate: LLAM10365 row: m column: 14
High quality sequence stop: 737.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX
PS   Claim 9; Page 37-39; 48pp; English.
XX
CC   This sequence represents the gene encoding human CD40 receptor associated
CC   protein (CRAP). CRAP is a functional protein capable of interacting with
CC   the cytoplasmic domain of CD40 and/or other receptors of the tumour
CC   necrosis factor (TNF) receptor superfamily such as CD30 and TNF receptor
CC   I, where the protein has no homology to TNF receptor associated factor
CC   (TRAF)-proteins. The CD40 binding proteins can be used as modulators of
CC   the CD40 signalling pathway, especially to diagnose and treat TRAF-
CC   related, CD40-related, NF-kappaB related and/or Jun (kinase)-related
CC   diseases, and for the improvement of anti-tumour diseases. Diseases which
CC   may be treated include atherosclerosis, arthritis, multiple sclerosis,
CC   systemic lupus erythematosus, graft rejection, graft versus host disease,
CC   allergy, and autoimmune disease. The proteins can be used to sensitize
CC   tumour cells to anti-tumour treatments and to screen for compounds which
CC   interfere with the interaction of the proteins with other protein
CC   components of the TRAF, CD40 or NF-kappaB related pathway

PT   Biomarkers useful for predicting or determining the response of a mammal
PT   to a cancer treatment comprising administration of a modulator of cyclin-
PT   dependent kinase activity.
XX
PS   Claim 5; SEQ ID NO 921; 141pp; English.
XX
CC   This invention describes a novel method of predicting or determining
CC   whether a mammal will respond or is responding to an anti-cancer agent
CC   that modulates cyclin-dependent kinase (cdk) activity. The method
CC   comprises measuring the level of one or more biomarkers selected from
CC   2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC   NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC   invention is utilized in a kit for determining or predicting whether
CC   patient would be susceptible or resistant to treatment by an agent
CC   modulating cdk activity. The invention also describes a method for
CC   utilizing individualized genetic profiles for treating diseases and
CC   disorders based on patient's response and molecular level, specialized
CC   microarrays comprising the biomarkers described, antibodies directed
CC   against the biomarkers and a cell culture model to identify biomarkers.
CC   The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-
CC   oxazolyl]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC   tartaric acid salt. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC   sequence encodes a biomarker used in the method of the invention.

XX
PT   Novel nucleic acids and polypeptides, useful for treating disorders such
PT   as central nervous system injuries.
XX
PS   Claim 1; SEQ ID NO 1200; 10078pp; English.
XX
CC   The invention relates to human nucleic acids (AAI57798-AAI61369) and the
CC   encoded polypeptides (AAM38642-AAM42213) with nootropic,
CC   immunosuppressant and cytostatic activity. The polynucleotides are useful
CC   in gene therapy. A composition containing a polypeptide or polynucleotide
CC   of the invention may be used to treat diseases of the peripheral nervous
CC   system, such as peripheral nervous injuries, peripheral neuropathy and
CC   localised neuropathies and central nervous system diseases, such as
CC   Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
CC   lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
CC   utilisation of the activities such as: Immune system suppression,
CC   Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC   and thrombolytic activity, cancer diagnosis and therapy, drug screening,

XX
CC   The invention describes an isolated polynucleotide (I) comprising a fully
CC   defined (S1) of 749, 3188, 2484, 1169, 2936, 1467, 5773, 5714, 4041,
CC   1372, 3996, 3945, 2735, 1788, 585, 1782, 927, 5714 or 2282 nucleotides as
CC   given in the specification, its translated or protein coding portion, its
CC   extracellular portion or its active domain. The GPCR-like polypeptides
CC   and polynucleotides are useful for the treatment of diseases of
CC   ophthalmic, neurological, immunological and nephritic systems. They may
CC   also be used to treat hormonal dysfunction, cancer, atherosclerosis and
CC   diabetes. The antibodies are useful for detecting or quantitating the
CC   polypeptide in tissue. The polypeptides can also be used as molecular
CC   weight markers and as a food supplement. This sequence represents a human
CC   polynucleotide of the invention.

XX
PS   Claim 1; SEQ ID NO 889; 99pp; English.
XX
CC   The invention relates to a polynucleotide comprising a sequence given in
CC   the specification, or its mature protein-coding portion, or its
CC   complement. The polynucleotide is useful for treating diseases e.g.,
CC   cancer or neurodegenerative diseases and many others listed in the
CC   specification. The present sequence represents a novel human cDNA. Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification but was obtained in electronic format directly from USPTO
CC   at seqdata.uspto.gov/sequence.html?DocID=20030104529.

PT Novel nucleic acids and polypeptides, useful for treating disorders such
PT as central nervous system injuries.
XX
PS Claim 1; SEQ ID NO 4772; 10078pp; English.
XX
CC The invention relates to human nucleic acids (AAI57798-AAI61369) and the
CC encoded polypeptides (AAM38642-AAM42213) with nootropic,
CC immunosuppressant and cytostatic activity. The polynucleotides are useful
CC in gene therapy. A composition containing a polypeptide or polynucleotide
CC of the invention may be used to treat diseases of the peripheral nervous
CC system, such as peripheral nervous injuries, peripheral neuropathy and
CC localised neuropathies and central nervous system diseases, such as
CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
CC utilisation of the activities such as: Immune system suppression,
CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC and thrombolytic activity, cancer diagnosis and therapy, drug screening,
CC assays for receptor activity, arthritis and inflammation, leukaemias and
CC C.N.S disorders. Note: The sequence data for this patent did not form
CC part of the printed specification

PT   New combination comprising cDNAs that are differentially expressed in
PT   colon disorder, useful for diagnosing, treating, staging or monitoring
PT   treatment for colon cancers.
XX
PS   Claim 1; SEQ ID NO 88; 231pp; English.
XX
CC   The invention relates to a combination comprising cDNAs that are
CC   differentially expressed in colon disorder. The methods and compositions
CC   of the present invention are useful for diagnosing, treating, staging or
CC   monitoring treatment for colon cancer. They are also useful in high
CC   throughput methods for using cDNAs to detect differential expression of
CC   nucleic acids in a sample, screening molecules or compounds to identify a
CC   ligand which specifically binds a cDNA and using a protein to screen
CC   molecules or compounds to identify at least one ligand which specifically
CC   binds the protein. The present sequence represents a human cDNA
CC   differentially expressed in colon cancer.

PT   New substantially purified polypeptide, useful for diagnosing or treating
PT   a hypoxia-regulated condition, such as cancer, ischemia, reperfusion
PT   injury, retinopathy, pre-eclampsia, atherosclerosis, inflammation, or
PT   wound healing.
XX
PS   Claim 27; SEQ ID NO 502; 424pp; English.
XX
CC   This invention relates to novel human genes and gene product which are
CC   implicated in certain disease states. Compounds which modulate the
CC   proteins of the invention may have cytostatic, antiinflammatory,
CC   ophthalmological, antiarteriosclerotic or vulnerary activities. The
CC   sequences of the invention may be useful for gene therapy. The invention
CC   may be useful for diagnosing or treating a hypoxia-regulated condition,
CC   such as tumourigenesis, angiogenesis, apoptosis, inflammation,
CC   erythropoiesis, or the biological response to hypoxia conditions
CC   including processes such as glycolysis, gluconeogenesis, glucose
CC   transportation, catecholamine synthesis, iron transport or nitric oxide
CC   synthesis. The disease includes cancer, ischaemic conditions, reperfusion
CC   injury, retinopathy, neonatal stress, pre-eclampsia, atherosclerosis,
CC   inflammatory conditions or wound healing. The present sequence is that of
CC   a disease related protein encoding DNA sequence of the invention.

XX
PS   Claim 1; SEQ ID NO 475; 2940pp; English.
XX
CC   The invention relates to a novel isolated nucleic acid and the PRO
CC   polypeptide encoded by it. A protein of the invention has
CC   antiinflammatory, antiarthritic, antirheumatic, immunosuppressive,
CC   osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic,
CC   antiasthmatic, hepatotropic, and respiratory activity. A polynucleotide
CC   of the invention may have a use in gene therapy. The PRO polypeptide, its
CC   agonist, antagonist, or antibody that specifically binds to the
CC   polypeptide is useful for treating an immune related disorder such as
CC   systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,
CC   juvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an
CC   idiopathic inflammatory myopathy, Sjogren's syndrome, systemic
CC   vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune
CC   thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal
CC   disease, a demyelinating disease of the central or peripheral nervous
CC   system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome,
CC   a chronic inflammatory demyelinating polyneuropathy, a hepatobiliary
CC   disease, infectious or autoimmune chronic active hepatitis, primary
CC   biliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis,
CC   inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's
CC   disease, an autoimmune or immune-mediated skin disease, a bullous skin
CC   disease, erythema multiforme, contact dermatitis, psoriasis, an allergic
CC   disease, asthma, allergic rhinitis, atopic dermatitis, food
CC   hypersensitivity, urticaria, an immunologic disease of the lung,
CC   eosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity
CC   pneumonitis, a transplantation associated disease, graft rejection or
CC   graft-versus-host disease. The present sequence encodes a PRO protein of
CC   the invention.

PT   Colon cancer associated gene sequences, referred to as colon cancer
PT   antigens, useful for the treatment, prevention, and diagnosis of colon
PT   disorders such as colon cancer.
XX
PS   Claim 1; Page 597; 2104pp; English.
XX
CC   AAC97991 to AAC98763 encode the human colon cancer associated proteins,
CC   called human colon cancer antigens, given in AAB53234 to AAB54006. The
CC   human colon cancer antigens can have cytostatic, cardioactive, muscular;
CC   neuroprotective, immunomodulatory, gynaecological, gastrointestinal,
CC   vulnerary, nephrotropic, antiinfective and antibacterial activities, and
CC   can be used in gene therapy. The colon cancer antigen polynucleotides,
CC   proteins and antibodies to the proteins are useful for the prevention,
CC   treatment and diagnosis of colon disorders, such as colon cancer. The
CC   polynucleotides may be used in diagnostics and research, such as for
CC   chromosome identification, and as hybridisation probes. The proteins may
CC   also be used to prevent diseases such as neural disorders, immune system
CC   disorders, muscular disorders, reproductive disorders, gastrointestinal
CC   disorders, wounds, renal disorders, infectious diseases, and
CC   cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent
CC   sequences used in the exemplification of the present invention

PT   Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT   length cDNAs defined in the specification, and for the detection and/or
PT   diagnosis of the abnormality of the proteins encoded by the full-length
PT   cDNAs.
XX
PS   Claim 8; SEQ ID NO 13209; 2537pp + Sequence Listing; English.
XX
CC   The present invention describes primer sets for synthesising 5602 full-
CC   length cDNAs defined in the specification. Where a primer set comprises:
CC   (a) an oligo-dT primer and an oligonucleotide complementary to the
CC   complementary strand of a polynucleotide which comprises one of the 5602
CC   nucleotide sequences defined in the specification, where the
CC   oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC   of an oligonucleotide comprising a sequence complementary to the
CC   complementary strand of a polynucleotide which comprises a 5'-end
CC   sequence and an oligonucleotide comprising a sequence complementary to a
CC   polynucleotide which comprises a 3'-end sequence, where the
CC   oligonucleotide comprises at least 15 nucleotides and the combination of
CC   the 5'-end sequence/3'-end sequence is selected from those defined in the
CC   specification. The primer sets can be used in antisense therapy and in
CC   gene therapy. The primers are useful for synthesising polynucleotides,
CC   particularly full-length cDNAs. The primers are also useful for the
CC   detection and/or diagnosis of the abnormality of the proteins encoded by
CC   the full-length cDNAs. The primers allow obtaining of the full-length
CC   cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC   AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC   represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC   oligonucleotides, all of which are used in the exemplification of the
CC   present invention

PT   Novel proteins used to treat inflammatory diseases, NF-kappaB related
PT   diseases and for improvement of anti-tumor treatments.
XX
PS   Claim 10; Page 41-43; 48pp; English.
XX
CC   This sequence represents the gene encoding mouse CD40 receptor associated
CC   protein (CRAP). CRAP is a functional protein capable of interacting with
CC   the cytoplasmic domain of CD40 and/or other receptors of the tumour
CC   necrosis factor (TNF) receptor superfamily such as CD30 and TNF receptor
CC   I, where the protein has no homology to TNF receptor associated factor
CC   (TRAF)-proteins. The CD40 binding proteins can be used as modulators of
CC   the CD40 signalling pathway, especially to diagnose and treat TRAF-
CC   related, CD40-related, NF-kappaB related and/or Jun (kinase)-related
CC   diseases, and for the improvement of anti-tumour diseases. Diseases which
CC   may be treated include atherosclerosis, arthritis, multiple sclerosis,
CC   systemic lupus erythematosus, graft rejection, graft versus host disease,
CC   allergy, and autoimmune disease. The proteins can be used to sensitize
CC   tumour cells to anti-tumour treatments and to screen for compounds which
CC   interfere with the interaction of the proteins with other protein
CC   components of the TRAF, CD40 or NF-kappaB related pathway

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 22058; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT   length cDNAs defined in the specification, and for the detection and/or
PT   diagnosis of the abnormality of the proteins encoded by the full-length
PT   cDNAs.
XX
PS   Claim 1; SEQ ID NO 4908; 2537pp + Sequence Listing; English.
XX
CC   The present invention describes primer sets for synthesising 5602 full-
CC   length cDNAs defined in the specification. Where a primer set comprises:
CC   (a) an oligo-dT primer and an oligonucleotide complementary to the
CC   complementary strand of a polynucleotide which comprises one of the 5602
CC   nucleotide sequences defined in the specification, where the
CC   oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC   of an oligonucleotide comprising a sequence complementary to the
CC   complementary strand of a polynucleotide which comprises a 5'-end
CC   sequence and an oligonucleotide comprising a sequence complementary to a
CC   polynucleotide which comprises a 3'-end sequence, where the
CC   oligonucleotide comprises at least 15 nucleotides and the combination of
CC   the 5'-end sequence/3'-end sequence is selected from those defined in the
CC   specification. The primer sets can be used in antisense therapy and in
```

```
CC   gene therapy. The primers are useful for synthesising polynucleotides,
CC   particularly full-length cDNAs. The primers are also useful for the
CC   detection and/or diagnosis of the abnormality of the proteins encoded by
CC   the full-length cDNAs. The primers allow obtaining of the full-length
CC   cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC   AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC   represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC   oligonucleotides, all of which are used in the exemplification of the
CC   present invention

PS   Claim 3; Page 60; 70pp; English.
XX
CC   This sequence encodes a human breast tumour protein immunogenic fragment
CC   of the invention. The polypeptides or nucleic acids encoding them are
CC   useful in vaccines and pharmaceutical compositions for manufacture of
CC   medicaments for inhibiting the development of breast cancer in a patient.
CC   They can also be used to treat breast cancer. Antibodies against these
CC   polypeptides can be used to detect and monitor progression of breast
CC   cancer in patients. Primers and probes derived from the polynucleotides
CC   encoding the breast proteins are useful for detection of breast cancer.
CC   Peripheral blood cells from a patient incubated in the presence of at
CC   least one polypeptide, such that T cells proliferate, are useful in
CC   manufacture of a medicament for treating breast cancer in a patient.
CC   Antigen presenting cells incubated in the presence of at least one
CC   polypeptide are also useful for treating breast cancer

PT   A novel isolated polypeptide comprising an immunogenic portion of a
PT   breast cancer protein useful in the detection and treatment of breast
PT   cancer.
XX
PS   Claim 4; Page 77; 95pp; English.
XX
CC   The present sequence was isolated from a breast tumour cDNA library. It
CC   is provided in a specification relating to compounds for immunotherapy
CC   and diagnosis of breast cancer. Breast tumour antigens and the
CC   polynucleotides that encode them may be used in the production of a
CC   pharmaceutical composition to be used in the treatment of breast cancer.
CC   Proliferated T cells and incubated antigen presenting cells are also
CC   required. The polypeptides and polynucleotides may also be used to
CC   produce a vaccine

PT   Polynucleotides encoding breast tumor polypeptides, useful for treating
PT   breast cancer or stimulating an immune response.
XX
PS   Claim 1; Page 131; 150pp; English.
XX
CC   The invention relates to polynucleotides encoding breast tumour
CC   polypeptides. The sequences are useful for treating cancer, preferably
CC   breast cancer, in a patient or for stimulating an immune response. The
CC   polynucleotides and polypeptides are also useful in the diagnosis and
CC   monitoring of breast cancer. A method for detecting the presence of a
CC   cancer in a patient, comprises obtaining a biological sample from the
CC   patient, contacting the biological sample with a binding agent that binds
CC   to a breast tumour polypeptide, detecting in the sample an amount of
CC   polypeptide that binds to the binding agent, and comparing the amount of
CC   polypeptide to a predetermined cut-off value, therefore determining the
CC   presence of a cancer in the patient. Sequences ABK28920-ABK29025
CC   represent cDNA clones encoding human breast tumour polypeptides of the
CC   invention

PT   New isolated nucleic acids and polypeptides capable of eliciting a
PT   humoral and/or cellular immune response, useful for diagnosing,
PT   preventing or treating cancer, particularly colon cancer.
```

```
XX
PS   Claim 1; SEQ ID NO 1067; 87pp; English.
XX
CC   The invention relates to polynucleotide and polypeptide sequences
CC   associated with cancer, particularly colon cancer. Also disclosed are (i)
CC   an expression vector comprising the polynucleotide, (ii) a host cell
CC   transformed or transfected with the expression vector, (iii) an isolated
CC   antibody, or its antigen-binding fragment, which specifically binds to
CC   the polypeptide, (iv) a method of detecting or determining the presence
CC   of cancer in a patient, (v) a fusion protein comprising at least one of
CC   the polypeptides, (vi) an oligonucleotide that hybridises to the
CC   polynucleotide sequence under highly stringent conditions, and (vii) a
CC   method of stimulating and/or expanding T cells specific for a tumour
CC   protein. The polypeptide specifically comprises the amino acid sequence
CC   of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC   frames (ORFs) of C636S. These polypeptides are encoded by the
CC   polynucleotide sequences, where both are capable of eliciting a humoral
CC   and/or cellular immune response. The polynucleotides, polypeptides, and
CC   antibodies are useful for diagnosing, preventing or treating cancer,
CC   particularly colon cancer. The polynucleotide and polypeptide sequences
CC   are also useful in DNA strand invasion, antisense inhibition, mutational
CC   analysis, nucleic acid purification, isolation of transcriptionally
CC   active genes, blocking or transcription factor binding, genome cleavage
CC   or in situ hybridisation, and as enhancers of transcription or
CC   biomarkers. This sequence represents a human colon cancer associated
CC   cDNA. Note: The sequence data for this patent was obtained in electronic
CC   format directly from the USPTO web site at seqdata.uspto.gov

PT   New isolated nucleic acids and polypeptides capable of eliciting a
PT   humoral and/or cellular immune response, useful for diagnosing,
PT   preventing or treating cancer, particularly colon cancer.
XX
PS   Claim 1; SEQ ID NO 1067; 244pp; English.
XX
CC   The invention relates to a new isolated nucleic acid. The nucleic acids,
CC   polypeptides, antibodies are useful for diagnosing, preventing or
CC   treating cancer, particularly colon cancer. The nucleic acid and
CC   polypeptides are also useful in DNA strand invasion, antisense
CC   inhibition, mutational analysis, nucleic acid purification, isolation of
CC   transcriptionally active genes, blocking or transcription factor binding,
CC   genome cleavage or in situ hybridization, and as enhancers of
CC   transcription or biomarkers. The kits are useful for detecting antibody
CC   binding. The present sequence represents a human cDNA encoding a colon
CC   cancer protein.

PT New isolated nucleic acids and polypeptides capable of eliciting a
PT humoral and/or cellular immune response, useful for diagnosing,
PT preventing or treating cancer, particularly colon cancer.
XX
PS Claim 1; SEQ ID NO 1070; 87pp; English.
XX
CC The invention relates to polynucleotide and polypeptide sequences
CC associated with cancer, particularly colon cancer. Also disclosed are (i)
CC an expression vector comprising the polynucleotide, (ii) a host cell
CC transformed or transfected with the expression vector, (iii) an isolated
CC antibody, or its antigen-binding fragment, which specifically binds to
CC the polypeptide, (iv) a method of detecting or determining the presence
CC of cancer in a patient, (v) a fusion protein comprising at least one of
CC the polypeptides, (vi) an oligonucleotide that hybridises to the
CC polynucleotide sequence under highly stringent conditions, and (vii) a
CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the
CC polynucleotide sequences, where both are capable of eliciting a humoral
CC and/or cellular immune response. The polynucleotides, polypeptides, and
CC antibodies are useful for diagnosing, preventing or treating cancer,
CC particularly colon cancer. The polynucleotide and polypeptide sequences
CC are also useful in DNA strand invasion, antisense inhibition, mutational
CC analysis, nucleic acid purification, isolation of transcriptionally
CC active genes, blocking or transcription factor binding, genome cleavage
CC or in situ hybridisation, and as enhancers of transcription or
CC biomarkers. This sequence represents a human colon cancer associated
CC cDNA. Note: The sequence data for this patent was obtained in electronic
CC format directly from the USPTO web site at seqdata.uspto.gov

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 22059; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

XX
PS Claim 1; SEQ ID NO 1084; 87pp; English.
XX
CC The invention relates to polynucleotide and polypeptide sequences
CC associated with cancer, particularly colon cancer. Also disclosed are (i)
CC an expression vector comprising the polynucleotide, (ii) a host cell
CC transformed or transfected with the expression vector, (iii) an isolated
CC antibody, or its antigen-binding fragment, which specifically binds to
CC the polypeptide, (iv) a method of detecting or determining the presence
CC of cancer in a patient, (v) a fusion protein comprising at least one of
CC the polypeptides, (vi) an oligonucleotide that hybridises to the
CC polynucleotide sequence under highly stringent conditions, and (vii) a
CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the
CC polynucleotide sequences, where both are capable of eliciting a humoral
CC and/or cellular immune response. The polynucleotides, polypeptides, and
CC antibodies are useful for diagnosing, preventing or treating cancer,
CC particularly colon cancer. The polynucleotide and polypeptide sequences
CC are also useful in DNA strand invasion, antisense inhibition, mutational
CC analysis, nucleic acid purification, isolation of transcriptionally
CC active genes, blocking or transcription factor binding, genome cleavage
CC or in situ hybridisation, and as enhancers of transcription or
CC biomarkers. This sequence represents a human colon cancer associated
CC cDNA. Note: The sequence data for this patent was obtained in electronic
CC format directly from the USPTO web site at seqdata.uspto.gov

XX
CC   The invention relates to a new isolated nucleic acid. The nucleic acids,
CC   polypeptides, antibodies are useful for diagnosing, preventing or
CC   treating cancer, particularly colon cancer. The nucleic acid and
CC   polypeptides are also useful in DNA strand invasion, antisense
CC   inhibition, mutational analysis, nucleic acid purification, isolation of
CC   transcriptionally active genes, blocking or transcription factor binding,
CC   genome cleavage or in situ hybridization, and as enhancers of
CC   transcription or biomarkers. The kits are useful for detecting antibody
CC   binding. The present sequence represents a human cDNA encoding a colon
CC   cancer protein.

XX
CC   The invention relates to a new isolated nucleic acid. The nucleic acids,
CC   polypeptides, antibodies are useful for diagnosing, preventing or
CC   treating cancer, particularly colon cancer. The nucleic acid and
CC   polypeptides are also useful in DNA strand invasion, antisense
CC   inhibition, mutational analysis, nucleic acid purification, isolation of
CC   transcriptionally active genes, blocking or transcription factor binding,
CC   genome cleavage or in situ hybridization, and as enhancers of
CC   transcription or biomarkers. The kits are useful for detecting antibody
CC   binding. The present sequence represents a human cDNA encoding a colon
CC   cancer protein.

PT New isolated prostate-derived nucleic acids - used to develop products
PT which may have cytokine, immune regulatory, haematopoiesis regulating,
PT anti-inflammatory or tumour inhibition activity.
XX
PS Claim 1; Page 298; 675pp; English.
XX
CC AAX40438 to AAX40715 represent 5' expressed sequence tags (ESTs) for
CC human secreted proteins expressed in prostate, and encode the proteins
CC given in AAY11716 to AAY11993 respectively. The proteins given represent
CC the signal peptide and an N-terminal fragment of a secreted protein. The
CC nucleic acid sequences can be used for producing secreted human gene
CC products. They can also be used to develop products for diagnosis and
CC therapy. The proteins obtained may have cytokine activity, cell
CC proliferation and differentiation activity, haematopoiesis regulating
CC activity, tissue growth regulating activity, reproductive hormone
CC regulating activity, chemotactic/chemokinetic activity, haemostatic and
CC thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC activity, tumour inhibition activity or other activities. The products
CC can be used in forensic, gene therapy and chromosome mapping procedures.
CC The sequences can also be used for obtaining corresponding promoter
CC sequences. The nucleic acids encoding the signal peptides can be used for
CC directing extracellular secretion of a polypeptide or the insertion of a
CC polypeptide into a membrane, or importing a polypeptide into a cell

CC not previously recognised to participate in mitochondrial biology. The
CC sequences shown in ADD33224-ADD35260 represent murine mitochondrial DNA
CC clones used to make the probes of the invention. Some sequences are not
CC present, these are SEQ ID NO's 295, 1174, 1213, 1700, 1728, 1730, 1905,
CC 1906, 2408 and 2643.

PT   New isolated nucleic acids and polypeptides capable of eliciting a
PT   humoral and/or cellular immune response, useful for diagnosing,
PT   preventing or treating cancer, particularly colon cancer.
XX
PS   Claim 1; SEQ ID NO 1363; 87pp; English.
XX
CC   The invention relates to polynucleotide and polypeptide sequences
CC   associated with cancer, particularly colon cancer. Also disclosed are (i)
CC   an expression vector comprising the polynucleotide, (ii) a host cell
CC   transformed or transfected with the expression vector, (iii) an isolated
CC   antibody, or its antigen-binding fragment, which specifically binds to
CC   the polypeptide, (iv) a method of detecting or determining the presence
CC   of cancer in a patient, (v) a fusion protein comprising at least one of
CC   the polypeptides, (vi) an oligonucleotide that hybridises to the
CC   polynucleotide sequence under highly stringent conditions, and (vii) a
CC   method of stimulating and/or expanding T cells specific for a tumour
CC   protein. The polypeptide specifically comprises the amino acid sequence
CC   of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC   frames (ORFs) of C636S. These polypeptides are encoded by the
CC   polynucleotide sequences, where both are capable of eliciting a humoral
CC   and/or cellular immune response. The polynucleotides, polypeptides, and
CC   antibodies are useful for diagnosing, preventing or treating cancer,
CC   particularly colon cancer. The polynucleotide and polypeptide sequences
CC   are also useful in DNA strand invasion, antisense inhibition, mutational
CC   analysis, nucleic acid purification, isolation of transcriptionally
CC   active genes, blocking or transcription factor binding, genome cleavage
CC   or in situ hybridisation, and as enhancers of transcription or
CC   biomarkers. This sequence represents a human colon cancer associated
CC   cDNA. Note: The sequence data for this patent was obtained in electronic
CC   format directly from the USPTO web site at seqdata.uspto.gov

PT   New nucleic acids encoding human secreted proteins - obtained from cDNA
PT   libraries prepared from kidney, fetal kidney, dystrophic muscle, muscle
PT   and heart tissue.
XX
PS   Claim 1; Page 319; 622pp; English.
XX
CC   AAX40826 to AAX41093 represent 5' expressed sequence tags (ESTs) for
CC   human secreted proteins, and encode the proteins given in AAY01602 and
CC   AAY11994 to AAY12260, respectively. The proteins given represent the
CC   signal peptide and an N-terminal fragment of a secreted protein. The
CC   nucleic acid sequences can be used for producing secreted human gene
CC   products. They can also be used to develop products for diagnosis and
CC   therapy. The proteins obtained may have cytokine activity, cell
CC   proliferation/differentiation activity, haematopoiesis regulating
CC   activity, tissue growth regulating activity, reproductive hormone
CC   regulating activity, chemotactic/chemokinetic activity, haemostatic and
CC   thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC   activity, tumour inhibition activity or other activities. The products
CC   can be used in forensic, gene therapy and chromosome mapping procedures.
CC   The sequences can also be used for obtaining corresponding promoter
CC   sequences. The nucleic acids encoding the signal peptide can be used for
CC   directing extracellular secretion of a polypeptide or the insertion of a
CC   polypeptide into a membrane, or importing a polypeptide into a cell

PT   Novel isolated polynucleotide encoding a polypeptide comprising a portion
PT   of colon tumor protein, useful for detection, diagnosis and therapy of
PT   human colon cancer.
XX
PS   Claim 1; Page 182; 220pp; English.
XX
CC   The invention relates to an isolated polynucleotide (I) encoding a
CC   polypeptide (II) comprising at least a portion of a colon tumour protein.
CC   (I), (II) and antibody (III) to (II) are useful for determining the
CC   presence of a cancer in a patient. (I), (II) or antigen presenting cells
CC   expressing (I) is useful for stimulating and/or expanding T cells
CC   specific for a tumour protein, by contacting T cells with (I), (II) or
CC   antigen-presenting cells that express (I), under conditions and for a
CC   time sufficient to permit the stimulation and/or expansion of T cells.
CC   (I), (II), or antigen presenting cells that express (II) are useful for
CC   treating colon cancer in a patient by incubating CD4+ and/or CD8+ T cells
CC   isolated from a patient with (I), (II) or antigen presenting cells that
CC   express (II), such that T cells proliferate, and administering to the
CC   patient an effective amount of the proliferated T cells, thus inhibiting
CC   the development of a cancer in the patient. (I) or (II) is useful in
CC   vaccines and pharmaceutical compositions for prevention and treatment of
CC   colon malignancies and for the diagnosis and monitoring of such cancers.
CC   (I), (II) or (III) is useful for detection, diagnosis and/or therapy of
CC   human colon cancer. (I) is useful as a probe or primer for nucleic acid
CC   hybridisation, and in the design and preparation of ribozyme molecules
CC   for inhibiting expression of (II) in tumour cells. ABK27564-ABK27807
CC   represent novel human colon cancer coding sequences and primers of the
CC   invention

PT   New isolated polynucleotide and pancreatic tumor polypeptides, useful for
PT   diagnosing, preventing and/or treating cancer, particularly pancreatic
PT   cancer.
XX
PS   Claim 1; SEQ ID NO 1367; 300pp + Sequence Listing; English.
XX
CC   The invention relates to an isolated polynucleotide (I) comprising: (a)
CC   any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b)
CC   complements of (a); (c) sequences consisting of at least 20 contiguous
CC   residues of (a); (d) sequences that hybridize to (a), under moderately
CC   stringent conditions; (e) sequences having at least 75% or 90% identity
CC   to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596-
CC   ABP68637) encoded by (I) and oligonucleotide can be used to detect cancer
CC   in a patient and compositions comprising polypeptides, polynucleotides,
CC   antibodies, fusion proteins, T cell populations and antigen presenting
CC   cells expressing the polypeptide are useful in treating pancreatic cancer
CC   and stimulating an immune response. The polynucleotides can be used as
CC   probes or primers for nucleic acid hybridisation, in the design and
CC   preparation of ribozyme molecules for inhibiting expression of the tumour
CC   polypeptides and proteins in the tumour cells, in vaccines and for gene
CC   therapy. Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Determining the degree of cytosine methylation in genomic DNA, useful for
PT   diagnosis and prognosis, comprises selective hybridization of amplicons
PT   from chemically treated DNA.
XX
PS   Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC   This invention describes a novel method for determining the degree of
CC   methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC   genomic sample of DNA. The sample is treated chemically to convert
CC   cytosine (C) but not methylated C, to uracil, then part of the genomic
CC   DNA that contains the target C is amplified to form a labeled amplicon.
CC   The amplicon is hybridised to two classes, each with at least one member,
CC   of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
CC   degree of hybridisation to both classes is determined from the label on
CC   the amplicon. From the ratio of labels hybridised to the two classes of
CC   oligomers, the degree of methylation is calculated. The method is used:
CC   (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
CC   and of a wide range of diseases, e.g. cancer, disorders of the central
CC   nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
CC   particularly by detecting mutations or single nucleotide polymorphisms
CC   (SNP's); and (ii) for differentiation of cell or tissue types and for
CC   investigating cell differentiation. The method allows the methylation
CC   status of many C residues to be determined simultaneously. ABQ13410-
CC   ABQ54121 represent genomic DNA sequences used to illustrate the method
CC   for determining the degree of cytosine methylation described in the
CC   disclosure of the invention

PT   Determining the degree of cytosine methylation in genomic DNA, useful for
PT   diagnosis and prognosis, comprises selective hybridization of amplicons
PT   from chemically treated DNA.
XX
PS   Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC   This invention describes a novel method for determining the degree of
CC   methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC   genomic sample of DNA. The sample is treated chemically to convert
CC   cytosine (C) but not methylated C, to uracil, then part of the genomic
CC   DNA that contains the target C is amplified to form a labeled amplicon.
CC   The amplicon is hybridised to two classes, each with at least one member,
CC   of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
CC   degree of hybridisation to both classes is determined from the label on
CC   the amplicon. From the ratio of labels hybridised to the two classes of
CC   oligomers, the degree of methylation is calculated. The method is used:
CC   (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
CC   and of a wide range of diseases, e.g. cancer, disorders of the central
CC   nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
CC   particularly by detecting mutations or single nucleotide polymorphisms
CC   (SNP's); and (ii) for differentiation of cell or tissue types and for
CC   investigating cell differentiation. The method allows the methylation
CC   status of many C residues to be determined simultaneously. ABQ13410-
CC   ABQ54121 represent genomic DNA sequences used to illustrate the method
CC   for determining the degree of cytosine methylation described in the
CC   disclosure of the invention

XX
CC   The present invention relates to a method of detecting the presence of
CC   ovarian cancer in a patient, involving detecting ovarian cancer
CC   associated polynucleotides. The method is not only used to detect the
CC   presence of cancer, preferably ovarian cancer in a patient, but also is
CC   used to stimulate and/or expand T cells specific for an ovarian tumour
CC   protein. The sequences can be used in vaccines used to treat cancer. The
CC   present sequence is an ovarian cancer associated coding sequence

PT   Determining the degree of cytosine methylation in genomic DNA, useful for
PT   diagnosis and prognosis, comprises selective hybridization of amplicons
PT   from chemically treated DNA.
XX
PS   Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC   This invention describes a novel method for determining the degree of
CC   methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC   genomic sample of DNA. The sample is treated chemically to convert
CC   cytosine (C) but not methylated C, to uracil, then part of the genomic
CC   DNA that contains the target C is amplified to form a labeled amplicon.
CC   The amplicon is hybridised to two classes, each with at least one member,
CC   of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
CC   degree of hybridisation to both classes is determined from the label on
CC   the amplicon. From the ratio of labels hybridised to the two classes of
CC   oligomers, the degree of methylation is calculated. The method is used:
CC   (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
CC   and of a wide range of diseases, e.g. cancer, disorders of the central
CC   nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
CC   particularly by detecting mutations or single nucleotide polymorphisms
CC   (SNP's); and (ii) for differentiation of cell or tissue types and for
CC   investigating cell differentiation. The method allows the methylation
CC   status of many C residues to be determined simultaneously. ABQ13410-
CC   ABQ54121 represent genomic DNA sequences used to illustrate the method
CC   for determining the degree of cytosine methylation described in the
CC   disclosure of the invention

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human cervical epithelial cells.
XX
PS   Claim 25; SEQ ID NO 5244; 487pp; English.
XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human cervical epithelial cells.
XX
PS   Claim 25; SEQ ID NO 14417; 487pp; English.
XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 5709; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New isolated nucleic acid molecule that encodes a plant protein or its
PT   fragment, useful for isolating a variety of agronomically significant
PT   genes associated with plant growth, quality or yield, and as molecular
PT   tags to map genes.
XX
PS   Claim 1; SEQ ID NO 14543; 34pp; English.
XX
CC   The invention relates to 17880 cotton expressed sequence tags (ESTs;
CC   ACN45220-ACN63099). The ESTs were isolated from cDNA libraries generated
CC   from primed or non-primed seeds from variety DP50B, mature seeds from
CC   variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
CC   tissue, developing fibres, carpel walls and septa from variety
CC   Nucotton33B. The invention also relates to substantially purified
CC   proteins or their fragments encoded by nucleic acid molecules of the
CC   invention, and to transformed plants having a nucleic acid construct
CC   comprising a nucleic acid of the invention. The cotton ESTs are useful as
CC   molecular tags to isolate genetic regions, to isolate genes, to map
CC   genes, to determine gene function and to determining whether genes are
CC   members of a particular gene family. The nucleic acid molecules may be
CC   used for isolating a variety of agronomically significant genes
CC   associated with plant growth, quality, yield, and could also serve as
CC   links in metabolic and catabolic pathways. The nucleic acid molecules are
CC   also useful for identifying genes important in initiating and maintaining
CC   seed germination or that may be used to mitigate stresses encountered
CC   during seed germination. The ESTs additionally enable the acquisition of
CC   promoters and cis-regulatory elements which will be useful to express
CC   agronomically significant genes in these tissues and/or other tissues,
CC   and also permits the acquisition of molecular markers useful in breeding
CC   schemes, genetic and molecular mapping, and in cloning of agronomically
CC   significant genes. The nucleic acid molecules are further useful for
CC   detecting the expression level or pattern of a protein or mRNA and for
CC   detecting the presence or quantity of a protein by tissue printing. The
CC   present sequence represents a specifically claimed EST isolated from a
CC   cotton variety Nucotton33B gynoecium tissue cDNA library (LIB3829). The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from the US
CC   patent office at seqdata.uspto.gov/sequence.html?DocID=US20040123340

PT   Determining whether agent has defined biological activity, by making
PT   comparison e.g. comparing efficacy value, toxicity value and classifier
PT   value of agent to reference values, and using results to determine
PT   whether agent has activity.
XX
PS   Example 3; SEQ ID NO 1725; 51pp; English.
XX
CC   The present invention relates to a methods for screening biologically
CC   active agents, such as candidate drugs, to determine whether the agent
CC   possesses a defined biological activity. The methods involve making one
CC   or more comparisons chosen from comparing efficacy value of agent to
CC   reference efficacy value, comparing a toxicity value of the agent to
CC   reference toxicity value, comparing a classifier value of the agent to
CC   reference classifier value, and using the comparison result(s) to
CC   determine whether the agent possesses the defined biological activity.
CC   Also claimed is a population of oligonucleotide probes (I) specific for
CC   measuring the expression levels of members of a classifier population of
CC   genes or a toxicity-related population of genes. (I) are useful for
CC   measuring the expression levels of genes that are useful for identifying
CC   agonists or partial agonists of Peroxisome Proliferator-Activated
CC   Receptor (PPAR) gamma. ADZ62007-ADZ62272 are oligonucleotide probes which
CC   are useful in the method of the invention to measure the expression
CC   pattern of the classifier-related population of mouse genes ADZ61748-
CC   ADZ62006. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from USPTO at seqdata.uspto.gov/sequence.html?DocID=20050084872.

XX
CC   The present invention relates to cancer associated sequences (ADQ97025-
CC   ADQ98004). The sequences are useful for the diagnosis, prevention and/or
CC   treatment of cancer, such as leukemia and lymphoma. Note: The sequence
CC   data for this patent did not form part of the printed specification, but
CC   was obtained in electronic formate directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   Use of DP119, DP444, DP810, DP685, WE474, DP160, RA977 or RA770 nucleic
PT   acid molecules or polypeptides, or their effectors or modulators, for
PT   manufacturing an agent for the diagnosis, prevention or treatment of
PT   pancreatic disorders.
XX
PS   Claim 3; SEQ ID NO 33; 125pp; English.
XX
CC   The present invention describes a nucleic acid molecule (I) selected from
CC   DP119, DP444, DP810, DP685, WE474, DP160, RA977 and RA770, or its encoded
CC   polypeptide, or a fragment or variant of the nucleic acid or polypeptide,
CC   or an effector/modulator of the nucleic acid or polypeptide. (I) is used
CC   in manufacturing a pharmaceutical agent, in monitoring or controlling the
CC   function of a gene or gene product influenced or modified by a DP119,
CC   DP444, DP810, DP685, WE474, DP160, RA977 or RA770 polypeptide, or in
CC   identifying substances that interact with the polypeptide. (I) has
CC   antidiabetic, anorectic and neuroprotective activities, and can be used
CC   in gene therapy. (I) is useful for diagnostic or therapeutic
CC   applications, or for manufacturing an agent for diagnosis, monitoring,
CC   prevention or treatment of pancreatic disorders, such as diabetes and
CC   related disorders, as well as neurodegenerative disorders, and other
CC   diseases. It may also be used for detecting and/or verifying, for the
CC   treatment, alleviation and/or prevention, of a pancreatic dysfunction
CC   (e.g. diabetes, hyperglycaemia or impaired glucose tolerance), and
CC   related disorders including obesity, and neurodegenerative disorders, and
CC   others, in cells, cell masses, organs and/or subjects. It is also used
CC   for regenerating or for promoting the differentiation and/or function of
CC   beta-cells in vitro and/or in vivo. (I) may also be used in preparing a
CC   non-human animal which over- or under-expresses the DP119, DP444, DP810,
CC   DP685, WE474, DP160, RA977 or RA770 gene product. In addition, the
CC   nucleic acid molecule, polypeptide or an effector/modulator of the
CC   nucleic acid or polypeptide, is used in monitoring or controlling the
CC   function of a gene or gene product influenced or modified by a DP119,
CC   DP444, DP810, DP685, WE474, DP160, RA977 or RA770 polypeptide, or in
CC   identifying substances that interact with the polypeptide. The present
CC   sequence is used in the exemplification of the present invention.

PT   Treating, preventing or ameliorating pathological conditions associated
PT   with dysregulation of the insulin signaling pathway (ISP) comprises
PT   administering to a subject an amount of a modulator of any of the
PT   proteins regulated by ISP.
XX
PS   Disclosure; SEQ ID NO 839; 70pp; English.
XX
CC   The present invention relates to a method for treating, preventing or
CC   ameliorating pathological conditions associated with dysregulation of the
CC   insulin signaling pathway (ISP). The method comprises administering to a
CC   subject a modulator for ISP-regulated proteins or a pharmaceutical
CC   composition comprising the described modulator. The method is useful for
CC   treating, preventing or ameliorating pathological conditions associated
CC   with dysregulation of the ISP such as Type II diabetes or Type A syndrome
CC   of insulin resistance. The present sequence is a human homolog of a
CC   Drosophila gene regulated by ISP. Note: The sequence data for this patent
CC   did not form part of the printed specification, but was obtained in
CC   electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20050085436.

XX
PS   Claim 1; SEQ ID NO 19427; 21pp + Sequence Listing; English.
XX
CC   The invention relates to an isolated nucleic acid detection reagent
CC   capable of detecting 1000 or more genes from Drosophila. The invention is
CC   useful in developmental biology and in elucidating cell signalling and
CC   cell-cell interactions in higher eukaryotes for the development of
CC   insecticides, therapeutics and pharmaceutical drugs. The invention
CC   discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC   sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC   ABB72072). The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 1141; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT New recombinant DNA construct comprising a promoter positioned to provide
PT for expression of a polynucleotide encoding a polypeptide from a
PT microbial source, useful for producing plants with improved properties.
XX
PS Claim 1; SEQ ID NO 24191; 122pp; English.
XX
CC The invention relates to a recombinant DNA construct comprising a
CC promoter functional in a plant cell, where the promoter is positioned to
CC provide for expression of a polynucleotide encoding a polypeptide from a
CC microbial source. The invention also relates to a transformed plant
CC comprising the recombinant DNA construct and a method of producing a
CC transformed plant having an improved property. The plant is a crop plant
CC such as maize or soybean. The method of producing a transformed plant
CC having an improved property comprises transforming a plant with the
CC recombinant DNA construct and growing the transformed plant, where the
CC polynucleotide or polypeptide is useful for improving plant properties.
CC The recombinant DNA construct is useful for producing plants with
CC improved plant properties, e.g. improved cold, heat or drought tolerance,
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polynucleotide used in
CC the scope of the invention. Note: The sequence data for this patent did
CC not form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT New use of irinotecan for preparation of compositions for treating cancer
PT in subject having genome with variant allele comprising cytochrome p450,
PT subfamily IIIA, polypeptide 5 polynucleotide, termed CYP3A5.
XX
PS Disclosure; SEQ ID NO 662; 86pp; English.
XX
CC The present invention describes the use of irinotecan (I) or its
CC derivative for the preparation of a pharmaceutical composition for
CC treating colorectal, cervical, gastric, lung, ovarian or pancreatic
CC cancer, or malignant glioma in a subject having a genome with a variant
CC allele which comprises a cytochrome p450, subfamily IIIA (nifedipine
CC oxidase), polypeptide 5 (CYP3A5) polynucleotide (II). (I) and (II) have
CC cytostatic activity. The therapeutic applications of (I) is improved,
CC since it is possible to individually treat a subject with an appropriate
CC dosage and/or an appropriate derivative of (I). Therefore, undesirable,
CC harmful or toxic effects are efficiently avoided. Unnecessary and
CC potentially harmful treatment of those subjects who do not respond to the
CC treatment with substances (nonresponders), as well as the development of
CC drug resistances due to suboptimal drug dosing can be avoided. ACF62200
CC to ACF62751 and ABM34912 to ABM35013 represent sequences used in the
CC exemplification of the present invention

CC   The present invention describes a method for the use of irinotecan (I) or
CC   its derivative for the preparation of a pharmaceutical composition for
CC   treating colorectal, cervical, gastric, lung, ovarian or pancreatic
CC   cancer, or malignant glioma in a subject having a genome with a variant
CC   allele which comprises a multidrug resistance protein 1 (MRP1)
CC   polynucleotide (II). (I) has cytostatic activity. (I) or its derivative
CC   can be used for the preparation of a pharmaceutical composition for
CC   treating colorectal, cervical, gastric, lung, ovarian or pancreatic
CC   cancer, or malignant glioma in a subject, where the subject is a human
CC   (preferably African or Asian) or a mouse. The present sequence represents
CC   a sequence which is used in the exemplification of the present invention.

PT   Use of irinotecan to treat cancer patient by determining if patient has
PT   variant alleles of UGT1A1 gene, administering increased/decreased amounts
PT   of irinotecan based on increased/decreased levels of UGT1A1 gene product.
XX
PS   Disclosure; SEQ ID NO 662; 107pp; English.
XX
CC   The invention relates to the novel use of irinotecan to treat a patient
CC   suffering from cancer. This involves determining if the patient has one
```

```
CC   or more variant alleles of the UGT1A1 gene, and if the patient has one or
CC   more of such variant alleles, irinotecan is administered in an increased
CC   or decreased amount in comparison to the amount that is administered
CC   without regard to the patient's alleles in the UGT1A1 gene. The invention
CC   has cytostatic activity. A composition of the invention acts as a
CC   topoisomerase I inhibitor. The method is useful for treating a patient,
CC   an animal e.g. mouse or a human, preferably African or Asian, suffering
CC   from cancer such as colorectal, cervical, gastric cancer, lung, ovarian,
CC   pancreatic cancer or malignant glioma. The present sequence is udes in
CC   the exemplification of the invention.

XX
CC   The invention relates to the novel use of irinotecan or its derivative
CC   for the preparation of pharmaceutical compositions for treating
CC   colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or
CC   malignant glioma in a subject having a genome with a variant allele which
CC   comprises a multidrug resistance 1 (MDR1) polynucleotide. A composition
CC   of the invention has cytostatic activity. The invention is useful for the
CC   preparation of pharmaceutical compositions for treating colorectal,
CC   cervical, gastric, lung, ovarian or pancreatic cancer, or malignant
CC   glioma in a subject (preferably human, more preferably African or Asian)
CC   or a mouse. The present sequence is used in the exemplification of the
CC   invention.

PT   New retrotransposable element where one or more polyadenylation sites
PT   have been removed from within the coding regions of its genes, useful in
PT   gene insertion and delivery applications e.g., gene therapy.
XX
PS   Claim 8; SEQ ID NO 2; 52pp; English.
XX
CC   The present sequence is that of retrotransposable element LINE-1 (long
CC   interspersed element-1 or L1) following removal of polyadenylation
CC   signals within the coding regions and optimisation of codon usage for
CC   expression in mammalian cells. This an example of a high efficiency
CC   retrotransposable element of the invention that is characterised by a DNA
CC   sequence that has been engineered to have fewer polyadenylation sites
CC   within the coding regions of its genes compared to the endogenous
CC   element. Retrotransposable elements of the invention may be further
CC   modified to add restriction sites for ease of use ADR46200. A method for
CC   increasing the expression of a gene in a retrotransposable element
CC   comprises identifying one or more putative polyadenylation sites in the
CC   element and mutagenise these to increase production of mRNA transcripts
CC   that comprise sequence located 3' to the mutagenesis polyadenylation
CC   site(s), while maintaining the original amino acid coding within the
CC   genes of the retrotransposable element. The retrotransposable element is
CC   useful for gene insertion and delivery applications, particularly for
CC   insertion of DNA into the genome of a cell or animal and for gene
CC   therapy. It is also useful for gene tagging and mutagenesis in mice. The
CC   retrotransposition potential of a modified retrotransposable element was
CC   compared with that of the wild-type using a standard retrotransposition
CC   experiment cassette in HeLa cells. The experiments supported a modest but
CC   statistically significant stimulation of retrotransposition by the
CC   polyadenylation mutations.

PT   with decreased expression or overexpression of functional CSAP e.g.,
PT   cancer.
XX
PS   Claim 5; Page 205-206; 233pp; English.
XX
CC   The invention relates to new human cytoskeleton-associated protein (CSAP)
CC   and its polynucleotide. The polypeptide is useful for preparing a
CC   composition for diagnosing or treating a disease or condition associated
CC   with decreased expression or overexpression of functional CSAP e.g.
CC   atherosclerosis or cancer. The present sequence is human CSAP-3 cDNA. The
CC   invention is useful in gene therapy

PT   New nucleic acid array useful for monitoring mRNA expression of
PT   Corynebacterium glutamicum during fermentation, comprising nucleic acid
PT   from Corynebacterium glutamicum.
XX
PS   Claim 1; Page 429; 709pp; German.
XX
CC   This invention describes a novel nucleic acid array involving
CC   Corynebacterium glutamicum polynucleotides. The arrays are used to
CC   analyse C. glutamicum, particularly for monitoring a fermentation process
CC   to determine expression levels of C. glutamicum cellular mRNA. Such
CC   monitoring particularly differentiates between expression levels of
CC   different strains of C. glutamicum and allows the adjustment of different
CC   culture and fermentation conditions. ACA00010-ACA02188 represent C.

PT   Novel polynucleotides derived from Coryneform bacteria, for identifying
PT   mutation point of a gene, measuring expression of a gene, analyzing
PT   expression profile or pattern of a gene and identifying homologous gene.
XX
PS   Claim 8; SEQ ID NO 2561; 246pp + Sequence Listing; English.
XX
CC   The present invention provides a number of nucleotide and protein
CC   sequences from the Coryneform bacterium Corynebacterium glutamicum. These
CC   are useful for identifying the mutation point of a gene derived from a
CC   mutant of coryneform bacterium, measuring expression amount and analysing
```

CC the expression profile or expression pattern of a gene derived from
CC Coryneform bacterium, and identifying a homologue of a gene derived from
CC coryneform bacterium. Coryneform bacteria are useful for producing amino
CC acids, nucleic acids, vitamins, saccharides and organic acids,
CC particularly L-lysine. The present sequence is a nucleic acid described
CC in the exemplification of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from the European Patent Office

COMMENT     On Nov 11, 2004 this sequence version replaced gi:54312159.
            ---------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            ---------- Project Information
                 Center project name: ifi
                 Center clone name: 012D21

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            ---------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 149480 bases at least Q40
                 Consensus quality: 149754 bases at least Q30
                 Consensus quality: 149909 bases at least Q20
                 Insert size: 155000; agarose-fp
                 Insert size: 149944; sum-of-contigs
                 Quality coverage: 9.52x in Q20 bases; agarose-fp
                 Quality coverage: 9.84x in Q20 bases; sum-of-contigs
            ----------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.

COMMENT     This clone is available royalty-free through IMAGE Consortium
            Distributors. IMPORTANT: This sequence represents the full insert
            of this IMAGE cDNA clone. No attempt has been made to verify
            whether this corresponds to the full-length of the original mRNA
            from which it was derived.

HS30M3
LOCUS       HS30M3                102200 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP1-30M3 on chromosome 6p22.1-22.3
            Contains the 5' end of gene KIAA0319, the gene for TRAF and TNF
            receptor-associated protein (TTRAP)(EAP2, AD022, MGC9099), gene
            FLJ20501, the 3' end of gene FLJ12619 (DKFZP564G182) and two CpG
            islands, complete sequence.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Dec 29, 1998 this sequence version replaced gi:4007165.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP1-30M3 is from the library RPCI-1 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2
            -------------- Genome Center

            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping

COMMENT     Sanger Xenopus tropicalis EST/cDNA project.
            This sequence is from a Xenopus Gene Collection (XGC) library, from
            a library constructed by Aaron M. Zorn. cDNA was prepared from RNA
            extracted from gastrula embryos. EcoRI-NotI cut cDNA was then
            ligated into pCS107 with EcoRI at the 5' end and NotI at the 3'
            end.
            Vector: pCS107; Site_1: EcoRI; Site_2: NotI
            Host: Escherichia coli XL1-blue.

            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Apr 26, 2001 this sequence version replaced gi:13751568.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep ----------
            Genome Center
            Center: UK Medical Research Council
            Center code: UK-MRC
            Web site: http://mrcseq.har.mrc.ac.uk
            Contact: mouseq@har.mrc.ac.uk
            ----------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to confirm this sequence.  Sequence data
            from the whole genome shotgun alone has only been used where it has
            a phred quality of at least 30.
            RP23-92G13 is from the RPCI-23 Mouse BAC Library
            constructed by the group of Pieter de Jong.
            For further details see http://www.chori.org/bacpac/home.htm

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 13, 2003 this sequence version replaced gi:23265926.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
```

```
          (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
          in the feature table below represents a scaffold in the Atlas
          assembly (a 'contig-scaffold'). Within each contig-scaffold,
          individual sequence contigs are ordered and oriented, and separated
          by sized gaps filled with Ns to the estimated size. The sequence
          may extend beyond the ends of the clone and there may be sequence
          contigs within a contig-scaffold that consist entirely of whole
          genome shotgun sequence reads. Both end sequences and whole genome
          shotgun sequence only contigs will be indicated in the feature
          table.
          -------------- Genome Center
              Center: Baylor College of Medicine
              Center code: BCM
              Web site: http://www.hgsc.bcm.tmc.edu/
              Contact: hgsc-help@bcm.tmc.edu
          -------------- Project Information
              Center project name: GJVU
              Center clone name: CH230-42H3
          -------------- Summary Statistics
              Assembly program: Atlas 3.0;
              Consensus quality: 238380 bases at least Q40
              Consensus quality: 239660 bases at least Q30
              Consensus quality: 240760 bases at least Q20
              Estimated insert size: 255581; sum-of-contigs estimation
              Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
          --------------
          * NOTE: Estimated insert size may differ from sequence length
          *    (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
          * NOTE: This sequence may represent more than one clone.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 2 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.

            Contact: zfish-help@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Repeat names beginning 'Dr' were identified by the Recon repeat
            discovery system (Zhirong Bao and Sean Eddy, submitted), and those
            beginning 'drr' were identified by Rick Waterman (Stephen Johnson
            lab, WashU).  For further information see
            http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml CH211-81E5
            is from a CHORI-211 BAC library

            Contact: zfish-help@sanger.ac.uk
            -------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Repeat names beginning 'Dr' were identified by the Recon repeat
            discovery system (Zhirong Bao and Sean Eddy, submitted), and those
            beginning 'drr' were identified by Rick Waterman (Stephen Johnson
            lab, WashU).  For further information see
            http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml DKEY-218N20
            is from a Zebrafish BAC library
            VECTOR: pIndigoBAC-5.

  TITLE     Direct Submission
  JOURNAL   Submitted (22-DEC-1998) Drosophila Genome Center, Lawrence Berkeley
            Laboratory, MS 64-121, Berkeley, CA 94720, USA
COMMENT     On Jul 28, 1999 this sequence version replaced gi:4510312.
            For further information about this sequence, including its location
            and relationship to other sequences, please visit our sequence
            archive Web site (http://www.fruitfly.org/sequence/) or send email
            to bdgp@fruitfly.berkeley.edu. All contigs in this submission meet
            the following cutoffs: length >= 200 bases. P1 library location:
            51-7.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1984: contig of 1984 bp in length
            *     1985     2064: gap of unknown length
            *     2065     4642: contig of 2578 bp in length
            *     4643     4722: gap of unknown length
            *     4723    10134: contig of 5412 bp in length
            *    10135    10214: gap of unknown length
            *    10215    16011: contig of 5797 bp in length
            *    16012    16091: gap of unknown length
            *    16092    84549: contig of 68458 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (21-JUN-1999) Drosophila Genome Center, Lawrence Berkeley
            Laboratory, MS 64-121, Berkeley, CA 94720, USA
COMMENT     On Feb 28, 2001 this sequence version replaced gi:6587775.
            Sequence submitted by:
            Berkeley Drosophila Genome Project
            Lawrence Berkeley National Laboratory, MS 64-121
            Berkeley, CA 94720
            This sequence was assembled using end sequences from a whole genome
            shotgun and from subclones of this BAC and its neighboring clones.
            For further information about this sequence, including its location
            and relationship to other sequences, please visit our sequence
            archive Web site (http://www.fruitfly.org/sequence/) or send email
            to bdgp@fruitfly.berkeley.edu.

TITLE Direct Submission
JOURNAL Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Jun 29, 2005 this sequence version replaced gi:59276098.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole

```
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

                Contact: nisc_mouse@nhgri.nih.gov
            -------------- Project Information
                Center project name: ur
                Center clone name: 104B17
            -------------- Summary Statistics
                Sequencing vector: plasmid; n/a; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.990319
                Consensus quality: 174572 bases at least Q40
                Consensus quality: 175790 bases at least Q30
                Consensus quality: 176302 bases at least Q20
                Insert size: 157000; agarose-fp
                Insert size: 212000; pulse-field-gel
                Insert size: 179029; sum-of-contigs
                Quality coverage: 7.99x in Q20 bases; agarose-fp
                Quality coverage: 5.92x in Q20 bases; pulse-field-gel
                Quality coverage: 7.01x in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 12 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2373: contig of 2373 bp in length

COMMENT     On Nov 29, 2000 this sequence version replaced gi:9799860.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0504O20
            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the left is RP11-514D19; the clone sequenced
            to the right is RP11-538A12.  Actual start of this clone is at base
            position 1 of RP11-504O20; actual end is at base position 176379 of
            RP11-504O20.

JOURNAL	Submitted (25-JUL-2002) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT	On Jul 26, 2002 this sequence version replaced gi:21955701. ---------- Genome Center Center: Wellcome Trust Sanger Institute Center code: SC Web site: http://www.sanger.ac.uk Contact: humquery@sanger.ac.uk ---------- During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
	This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-69G24 is from the RPCI-23 Mouse PAC Library constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm VECTOR: pBACe3.6.

TITLE Direct Submission
JOURNAL Submitted (08-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Sep 23, 2002 this sequence version replaced gi:21738728.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

---------- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
---------- Project Information
Center project name: GRGC
Center clone name: CH230-99D20
---------- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 186934 bases at least Q40
Consensus quality: 190979 bases at least Q30
Consensus quality: 193518 bases at least Q20
Estimated insert size: 213564; sum-of-contigs estimation
Quality coverage: 3x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 6 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 14442: contig of 14442 bp in length
* 14443 14542: gap of unknown length
* 14543 189203: contig of 174661 bp in length
* 189204 189303: gap of unknown length
* 189304 226103: contig of 36800 bp in length
* 226104 226203: gap of unknown length
* 226204 227571: contig of 1368 bp in length
* 227572 227671: gap of unknown length
* 227672 229227: contig of 1556 bp in length
* 229228 229327: gap of unknown length
* 229328 233372: contig of 4045 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (21-SEP-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Sep 21, 2002 this sequence version replaced gi:21909206.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequening reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/).  As a result, the
            sequence may extend beyond the ends of the clone and there may be
            contigs that consist entirely of whole genome shotgun sequence
            reads.  Both end sequences and whole genome shotgun sequence only
            contigs will be indicated in the feature table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GYHA
                Center clone name: CH230-172L11
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 213742 bases at least Q40
                Consensus quality: 216345 bases at least Q30
                Consensus quality: 217596 bases at least Q20
                Estimated insert size: 238142; sum-of-contigs estimation
                Quality coverage: 3x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   238012: contig of 238012 bp in length
            *  238013   238112: gap of unknown length
            *  238113   239241: contig of 1129 bp in length.

TITLE     Direct Submission
JOURNAL   Submitted (01-JUL-2005) Human Genome Sequencing Center, Department
          of Molecular and Human Genetics, Baylor College of Medicine, One
          Baylor Plaza, Houston, TX 77030, USA
COMMENT   On Jun 26, 2005 this sequence version replaced gi:58037717.
          The sequence in this assembly is a combination of BAC based reads
          and whole genome shotgun sequencing reads assembled using Atlas
          (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
          in the feature table below represents a scaffold in the Atlas
          assembly (a 'contig-scaffold'). Within each contig-scaffold,
          individual sequence contigs are ordered and oriented, and separated
          by sized gaps filled with Ns to the estimated size. The sequence
          may extend beyond the ends of the clone and there may be sequence
          contigs within a contig-scaffold that consist entirely of whole
          genome shotgun sequence reads. Both end sequences and whole genome
          shotgun sequence only contigs will be indicated in the feature
          table.

              Center: Baylor College of Medicine
              Center code: BCM
              Web site: http://www.hgsc.bcm.tmc.edu/
              Contact: hgsc-help@bcm.tmc.edu
          -------------- Project Information
              Center project name: FAUB
              Center clone name: CH240-14A22
          -------------- Summary Statistics
              Assembly program: Atlas 3.0;
              Consensus quality: 200225 bases at least Q40
              Consensus quality: 202716 bases at least Q30
              Consensus quality: 205063 bases at least Q20
              Estimated insert size: 206058; sum-of-contigs estimation
              Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
          --------------
          * NOTE: Estimated insert size may differ from sequence length
          *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 26 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *        1     2265: contig of 2265 bp in length

COMMENT     NEDO human cDNA sequencing project supported by Ministry of
            Economy, Trade and Industry of Japan; cDNA full insert sequencing:
            Research Association for Biotechnology (RAB); cDNA library
            construction: Helix Research Institute (HRI) (supported by Japan
            Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
            HRI, and Biotechnology Center, National Institute of Technology and
            Evaluation; clone selection for full insert sequencing: HRI and
            RAB; annotation: Reverse Proteomics Research Institute, HRI and
            RAB.

COMMENT     NEDO human cDNA sequencing project supported by Ministry of
            Economy, Trade and Industry of Japan; cDNA full insert sequencing:
            Research Association for Biotechnology (RAB); cDNA library
            construction: Helix Research Institute (HRI) (supported by Japan
            Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
            HRI, and Biotechnology Center, National Institute of Technology and
            Evaluation; clone selection for full insert sequencing: HRI and
            RAB; annotation: HRI and RAB.

  JOURNAL   Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage :
            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.

COMMENT     1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.

            - Web : www.genoscope.cns.fr)
COMMENT     1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On May 15, 2003 this sequence version replaced gi:30775195.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 3474.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0BAI056ZD12_CS05372_1&c=3474.r

DEFINITION	AGENCOURT_6649780 NIH_MGC_114 Homo sapiens cDNA clone IMAGE:5764440 5', mRNA sequence.
ACCESSION	BM926092
VERSION	BM926092.1 GI:19376471
KEYWORDS	EST.
SOURCE	Homo sapiens (human)
ORGANISM	Homo sapiens Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.
REFERENCE	1 (bases 1 to 1046)
AUTHORS	NIH-MGC http://mgc.nci.nih.gov/.
TITLE	National Institutes of Health, Mammalian Gene Collection (MGC)
JOURNAL	Unpublished (1999)
COMMENT	Contact: Robert Strausberg, Ph.D. Email: cgapbs-r@mail.nih.gov Tissue Procurement: Life Technologies, Inc. cDNA Library Preparation: Life Technologies, Inc. cDNA Library Arrayed by: The I.M.A.G.E. Consortium (LLNL) DNA Sequencing by: Agencourt Bioscience Corporation Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Plate: LLAM12817 row: o column: 01 High quality sequence start: 4 High quality sequence stop: 632.

FEATURES	Location/Qualifiers
source	1. .1046 /organism="Homo sapiens" /mol_type="mRNA" /db_xref="taxon:9606" /clone="IMAGE:5764440" /lab_host="DH10B" /clone_lib="NIH_MGC_114" /note="Organ: brain; Vector: pCMV-SPORT6; Site_1: NotI; Site_2: EcoRV (destroyed); RNA source anonymous pool of 6 male brains, age range 23-27 yo. Library is oligo-dT primed and directionally cloned (EcoRV site is destroyed upon cloning). Average insert size 1.5 kb, insert size range 1-3 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 019. Note: this is a NIH_MGC Library."

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen. This sequence belongs to sequence cluster
            3474.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DI042CF10QP1&c=3474.r.

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen. This sequence belongs to sequence cluster
            3474.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DK007AF03QP1&c=3474.r.

JOURNAL	Unpublished (2004)
COMMENT	Contact: MIPS MIPS Ingolstaedter Landstr.1, D-85764 Neuherberg, Germany This is the 5' sequence of the clone insert. Clone from S. Wiemann, Molecular Genome Analysis, German Cancer Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de; sequenced by Medigenomix (Martinsried/Germany) within the cDNA sequencing consortium of the German Genome Project. This clone (DKFZp469E2434) is available at the RZPD Deutsches Ressourcenzentrum fuer Genomforschung GmbH in Berlin, Germany. Please contact RZPD for ordering: http://www.rzpd.de/cgi-bin/products/cl.cgi?CloneID=DKFZp469E2434 Further information about the clone and the sequencing project is available at http://mips.gsf.de/projects/cdna/.

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen. This sequence belongs to sequence cluster
            3474.r

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 13, 2001 this sequence version replaced gi:30490655.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 3474.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DA005BF11QP1&c=3474.r.

COMMENT Please visit our web site (http://genome.gsc.riken.jp/) for further details.
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence [5' GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCCC 3']. cDNA was cleaved with XhoI and SstI. Cloning sites, 5' end: XhoI; 3' end: SstI. Host: SOLR.

            Ingolstaedter Landstr.1, D-85764 Neuherberg, Germany
            This is the 5' sequence of the clone insert. Clone from S. Wiemann,
            Molecular Genome Analysis, German Cancer Research Center (DKFZ);
            Email s.wiemann@dkfz-heidelberg.de; sequenced by Medigenomix
            (Martinsried/Germany) within the cDNA sequencing consortium of the
            German Genome Project. This clone (DKFZp468J1522) is available at
            the RZPD Deutsches Ressourcenzentrum fuer Genomforschung GmbH in
            Berlin, Germany. Please contact RZPD for ordering:
            http://www.rzpd.de/cgi-bin/products/cl.cgi?CloneID=DKFZp468J1522
            Further information about the clone and the sequencing project is
            available at http://mips.gsf.de/projects/cdna/.
